

Tiger Claw
Hidden Deck Fasteners

Finally a Better Way to Build a Deck!

Taking The Pain Out Of Deck Building...

Tiger Claw
Hidden Deck Fasteners

hidden deck fasteners create a smooth “nail-free” surface, which preserves the beauty of the wood and reduces splitting, splintering, cupping, and rotting. With Tiger Claw, costs and installation time of timber decking will be reduced dramatically. Tropical hardwoods requires special deck fasteners. Today, builders and homeowners are choosing such woods as Ipe, Cambara and Meranti because of their beauty, durability, strength, and natural resistance to decay, wet conditions, and insect infestation. With exotic woods, hidden deck fasteners eliminate the laborious process of pre-drilling with a counter sink bit, installing the screw, covering the screw with a wooden plug and then sanding the surface until smooth.

TC-150

To increase the already quick installation time of the TC-G (TC-150), Tiger Claw has introduced an installation gun compatible with the TC-G (TC-150) and hidden fasteners. Tiger Claw also offers High Performance Deck Screws, available in four different colors. Homeowners can now have a better-looking, longer-lasting, and safer deck in less time and truly enhance the value of the more expensive exotic woods.
